

DECKS & BALCONIES / FEBRUARY 2023

Did you know that there are over 60 million decks in the U.S. and that an estimated 30 million are past their useful life and need replaced or repaired? Outdoor living spaces are one of the top trends in the market today for new and remodeling projects. Whether it's a residential or commercial project, designing a deck or balcony has many challenges in specifying the correct materials to ensure a durable, safe and long-lasting installation. Rain, snow, salt-water, freeze-thaw and fire are just a few of the environmental issues that must be addressed. With Spring less than 40 days away, we thought it would be a great time to turn your attention outdoors and our TI-ProBoard® Structural Ribbed Self-supporting Board for decks and balconies.

FinPan offers a unique structural underlayment that addresses all of these issues and more. TI-ProBoard is a pultruded composite board manufactured of fiber-reinforced, composite polymers with an integral fiberglass backing and 3/8" dovetailed ribs. It attaches directly to deck joists and panels are connected to one another via its tongue and groove design. It's unaffected by expansion, contraction or other weather conditions.

TI-ProBoard is the only single component system on the market today for bringing the beauty and durability of tile to your outdoor retreat. TI-ProBoard has been third party tested and is recognized in the Tile Council of North America (TCNA) Handbook as the only Structural Ribbed Self-supporting Board (SRSB) of its kind.

TI-ProBoard® Structural Composite Underlayment

We invite architects and designers looking to earn CEU's to take our free AIA accredited course on "New Technologies for Tiling Decks and Balconies".

Go to aecdaily.com to take this and our other accredited courses for CEU's.

Durability & Low Maintenance

If you're looking to specify a sustainable, durable and low maintenance exterior tile deck look no further than TI-ProBoard. With its 3/8" low-profile design, TI-ProBoard allows you to seamlessly carry your interior tile to the deck on residential and commercial projects.

TI-ProBoard is not used in conjunction with any other wood material, such as plywood or deck boards. Simply install 1' x 8' or 12' boards directly to the deck joists ensuring proper slope to shed water.

With TI-ProBoard installed you can rest assure knowing that in independent testing it achieved an Extra-Heavy Floor rating in the Robinson Floor Test, ASTM C627. It also achieved a Commercial Floor rating in the 14' Suspended Robinson Floor Test.

"NEW" Approved Installation: Decorative & Stamped Concrete

We've just approved a new way to use TI-ProBoard on deck and balcony projects. You can now finish your deck or balcony with popular decorative concrete finishes directly on top of TI-ProBoard.

The trend in use of decorative concrete in residential and commercial buildings has become a very popular finish for pool decks, patios and driveways. In fact, the market in 2021 was estimated at \$15 billion and is forecasted to grow to \$23 billion by 2028. Advantages of decorative concrete include that it lasts longer and requires less maintenance than most other materials. It also offers a wide range of colors and finishes.

Requirements for using TI-ProBoard in this application are deck joists framed on 16" o.c., 3,000 psi concrete, and a total pour of 1".
